

Strong As An Ox™

## BX88189 Movable SportLift Kit Pak Actuator Style Instructions

1. Pin Item 1 (pinned assembly) into the deck of SportLift.
2. Slide both of Item 2 (slide-in assemblies) into the deck, making sure to go through the tie down rods as shown in the diagram below. Loosen up the flats enough to go over the tie down rod. Then tighten the flats down to clamp over the tie down rods.
3. Pin the slider support tubes on the bottom side of the 5 x 7 tube of the Sportlift in the extended position shown below.
4. Put the Item 3 (support assemblies) into the angles on the front side of the deck, then adjust the height of these assemblies by tightening the 1/2-13 hex bolt. Stick the 5/8" pin through the top of the slider tube, then stick the pin through the flat as shown below.
5. Make sure the angle is butted up against the bottom side of the slider tube.
6. Take the pins out of the two outside receivers, then loosen the stinger brackets to make it easier for the Sportlift to come out of the receivers.
7. The SportLift should slide out, this may take two people.
