

Air Bag Equipped Chassis Handling Solutions

I have to keep both hands on the steering wheel, even on good roads, with no wind!

Solution: A TruCenter™ Steering Control will hold the tie-rod with up to 270 lbs of pressure. This will make your vehicle go straighter without constant steering wheel correction. It will be much easier to drive with less fatigue, and all front-end parts and tires will last longer.

I am concerned about a front tire blowout!

Solution: A TruCenter™ Steering Control will hold you in a straight ahead position, Even with a front tire blowout.

I always have to steer into a side wind or crowned roads; it wears me out!

Solution: With the push of a button mounted on the dash, a TruCenter™ Steering Control will Re-center itself to compensate for side winds or crowned roads. This feature makes driving in winds a whole lot easier.

My coach rocks side to side violently when I am going into a fuel stop or a rural campground. It also leans hard to one side in a sharp corner.

Solution: Air Bag restrictor valves prevent air in the air bags from rushing from one air bag to the other greatly reducing the side to side rock and roll. They also help if your coach porpoises or dives under hard braking.

NOTE: *Use of restrictors on computer controlled air leveling systems may cause the leveling system not to react properly.*
